The Modern Solution

Campus recruitment is the pivotal bridge between academic excellence and industrial professional demand. Our system modernizes this transition.

- ✓ Integrated Full-Stack Ecosystem
- ✓ Real-time Application Tracking
- ✓ Data-Driven Recruitment Insights

Problem Statement

-  **Lack of Data Integrity:** Information scattered across fragmented spreadsheets and personal emails.
-  **Security Risks:** Sensitive student data and resumes exposed without proper encryption or access control.
-  **Inefficient Matching:** No automated way to score resumes against specific job descriptions efficiently.
-  **Transparency Gap:** Students lack real-time visibility into their application and shortlisting status.

Microservice Design

Our platform is built using a modern, scalable microservice architecture ensuring high availability and seamless data flow between components.

The API Gateway manages client requests, routing them to specific services while maintaining centralized security and monitoring protocols.

Technology Stack

Frontend

React.js with Redux
Toolkit for high-
performance state
management and dynamic
UI.

Backend

Node.js & Express.js
providing robust REST
API services and secure
routing.

Database

MongoDB for scalable,
schema-less document
storage of resumes and
jobs.

Security

JWT authentication &
Bcrypt hashing for secure,
persistent user sessions.

Core Platform Features

Secure Auth

Role-based access control for Students and Recruiters with secure sessions.

AI Resume Scoring

Leveraging Google Gemini for instant score and strength analysis on resumes.

Admin Dashboard

Real-time applicant management and status updates for recruiters.

Platform Impact Metrics

75%

Faster Processing

Reduction in manual screening time.

100%

Secure Data

End-to-end encryption of identifiers.

Technical Deep Dive

Component	Technology	Primary Purpose
Frontend	React + Tailwind CSS	Modern, responsive User Interface
State Management	Redux Toolkit	Centralized data flow for Jobs/User
Backend API	Express + Multer	REST API & File processing
Storage	Cloudinary	Cloud hosting for resumes and images
AI Engine	Google Gemini API	Natural Language resume analysis

FUNCTIONAL MODULES

Tailored experiences for every user segment

-  **Smart Profile:** Dynamic resume building and skill tagging for students.
-  **Advanced Discovery:** Search internships by keyword, role, and location.
-  **One-Click Application:** Apply to multiple postings using saved credentials.
-  **Feedback Loop:** View real-time shortlisting status and AI score tips.

Recruiter Dashboard

-  **Company Setup:** Create and manage a branded profile for the organization.
-  **Job Posting:** Post roles with detailed requirements and salary bands.
-  **Applicant Tracking:** Scrutinize automated AI resume analysis.
-  **Status Management:** Bulk accept or reject candidates with notifications.

Interface Showcase

Modern UX Principles

Designed with a focus on accessibility and ease of use, ensuring students can focus on applications while recruiters manage pipelines efficiently.

-  Fully Responsive Design
-  Modern Dark/Light Themes

Internship Role Distribution

UNIVERSITY

Implementation Timeline

Conclusion

Real-time Chat

Socket.io for recruiter interaction.

Assessments

Built-in technical screening tests.

Mobile Apps

Native iOS/Android job notifications.

Forecasting

Predictive trends via historical data.
